

Introduction

The HC5FW family is for the electronic measurement of DC, AC or pulsed currents in high power and low voltage automotive applications with galvanic separation between the primary circuit (high power) and the secondary circuit (electronic circuit). The HC5FW family gives you the choice of having different current measuring ranges in the same housing.

Features

- Open Loop transducer using the Hall effect
- Low voltage application
- Unipolar +5 V DC power supply
- Primary current measuring range up to ± 900 A
- Maximum RMS primary current limited by the busbar, the magnetic core or the ASIC temperature $T < +150$ °C
- Operating temperature range: -40 °C $< T < +125$ °C
- Output voltage: full ratiometric (sensitivity and offset)
- High speed transducer.

Advantages

- Good accuracy
- Good linearity
- Low thermal offset drift
- Low thermal sensitivity drift.

Automotive applications

- Electrical Power Steering
- Starter Generators
- Converters.

Principle of HC5FW Family

The open loop transducers uses a Hall effect integrated circuit. The magnetic flux density B , contributing to the rise of the Hall voltage, is generated by the primary current I_p to be measured. The current to be measured I_p is supplied by a current source i.e. battery or generator (Figure 1). Within the linear region of the hysteresis cycle, B is proportional to:

$$B(I_p) = a \times I_p$$

The Hall voltage is thus expressed by:

$$U_{Hall} = (c_{Hall} / d) \times I_{Hall} \times a \times I_p$$

Except for I_p , all terms of this equation are constant. Therefore:

$$U_{Hall} = b \times I_p$$

a constant

b constant

c_{Hall} Hall coefficient

d thickness of the Hall plate

I_{Hall} current across Hall plates

The measurement signal U_{Hall} is amplified to supply the user output voltage or current.

Fig. 1: Principle of the open loop transducer.

Dimensions HC5FW 900-S (in mm)

Drawing for information only

Mechanical characteristics

- Plastic case PA 66 GF 25
- Magnetic core FeSi alloy
- Plastic cover PA 6T/66 GF 30
- Mass 27.5 g
- Electrical terminal coating Tin plated
- General tolerance ± 0.25 mm

Mounting recommendation

- Connector type None
- Assembly torque max None
- Soldering profile See page 7

Electronic schematic

Absolute ratings (not operating)

Parameter	Symbol	Unit	Specification			Conditions
			Min	Typical	Max	
Maximum supply voltage	$U_{C\ max}$	V			8	not operating
					6.5	Exceeding this voltage may temporary reconfigure the circuit until the next power-on
Maximum primary current peak	$\hat{I}_{P\ max}$	A			³⁾	
Ambient storage temperature	$T_{A\ st}$	°C	-40		125	
Electrostatic discharge voltage	$U_{ESD\ HBM}$	kV			2	JESD22-A114-B Class 2
Maximum admissible vibration (random)	$\gamma_{\ max}$	m·s ⁻²	90			10 to 1000 Hz
RMS voltage for AC insulation test, 50 Hz, 1 min	U_d	kV			2.5	50 Hz, 1 min, IEC 60664 part1
Insulation resistance	R_{INS}	MΩ	500			
Creepage distance	d_{CP}	mm	7.1			
Clearance	d_{CI}	mm	5.5			
Comparative tracking index	CTI	V	550 on case / 600 on cover			
Maximum reverse current	$I_{rev\ max}$	mA	-80		80	

Operating characteristics in nominal range ($I_{P\ N}$)

Parameter	Symbol	Unit	Specification			Conditions
			Min	Typical	Max	
Electrical Data						
Primary current, measuring range	I_{PM}	A	-900		900	
Primary nominal DC or RMS current	I_{PN}	A	-900		900	
Calibration current	I_{cal}	A	450		450	@ $T_A = 25\text{ }^{\circ}\text{C}$
Supply voltage ¹⁾	U_C	V	4.75	5.00	5.25	
Ambient operating temperature	T_A	$^{\circ}\text{C}$	-40		125	
Output voltage (Analog)	U_{out}	V	$U_{out} = (U_C/5) \times (U_O + S \times I_P)$			@ U_C
Sensitivity	S	mV/A		2.22		@ $U_C = 5\text{ V}$
Offset voltage	U_O	V		2.5		@ $T_A = 25\text{ }^{\circ}\text{C}$, @ $U_C = 5\text{ V}$, Hysteresis included
Current consumption	I_C	mA		19	25	@ $U_C = 5\text{ V}$, $-40\text{ }^{\circ}\text{C} < T_A < 125\text{ }^{\circ}\text{C}$
Load resistance	R_L	K Ω	10			
Load capacitance	C_L	nF		4.7	6.8	
Output internal resistance	R_{out}	Ω			10	DC to 1 KHz
Performance Data ¹⁾						
Ratiometricity error	ε_r	%		0.5		
Sensitivity error	ε_S	%		± 0.6		@ $T_A = 25\text{ }^{\circ}\text{C}$
Electrical offset voltage	U_{OE}	mV		± 2.5		@ $T_A = 25\text{ }^{\circ}\text{C}$, @ $U_C = 5\text{ V}$
Magnetic offset voltage	U_{OM}	mV		± 2		@ $T_A = 25\text{ }^{\circ}\text{C}$, @ $U_C = 5\text{ V}$, after $\pm I_P$
Total error @ 0 A	ε_{tot}	mV	-13		13	@ $T_A = 25\text{ }^{\circ}\text{C}$, @ $U_C = 5\text{ V}$, Hysteresis included
Average temperature coefficient of U_{OE}	$TCU_{OE\,AV}$	mV/ $^{\circ}\text{C}$	-0.08		0.08	@ $-40\text{ }^{\circ}\text{C} < T < 125\text{ }^{\circ}\text{C}$
Average temperature coefficient of S	TCS_{AV}	%/ $^{\circ}\text{C}$	-0.03		0.03	@ $-40\text{ }^{\circ}\text{C} < T < 125\text{ }^{\circ}\text{C}$
Linearity error	ε_L	% I_P	-1		1	Of full range
Delay time to 90 % to the final output value for I_{PN} step	$t_{D\,90}$	μs		2	6	$di/dr = 100\text{ A}/\mu\text{s}$
Frequency bandwidth ²⁾	BW	kHz	40			@ -3 dB
Phase shift	$\Delta\varphi$	$^{\circ}\text{C}$	-4		0	@ DC to 1 kHz
Minimum output voltage	$U_{out\,min}$	V			0.2	@ $U_C = 5\text{ V}$
Maximum output voltage	$U_{out\,max}$	V	4.8			@ $U_C = 5\text{ V}$
Peak-to-peak noise voltage	$U_{no\,pp}$	mV			12	DC to 1 MHz

Notes: ¹⁾ The output voltage U_{out} is fully ratiometric. The offset and sensitivity are dependent on the supply voltage U_C relative to the following formula:

$$I_P = \left(\frac{5}{U_C} \times U_{out} - U_O \right) \times \frac{1}{S} \text{ with } S \text{ in (V/A)}$$

²⁾ Small signal only to avoid excessive heating of the busbar, the magnetic core and the ASIC

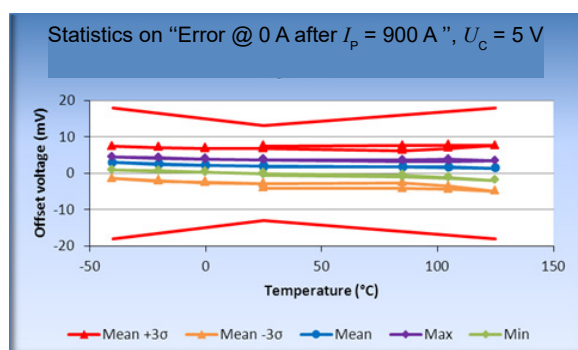

³⁾ Busbar temperature must be below 150 °C.

Absolute Error (mV)

Primary current I_p (A)	Error @ 25 °C (mV)	Error @ T range (mV)
-900	±50	±75
-800	±40	±60
0	±13	±18
800	±40	±60
900	±50	±75

* Total error specified at ± 3 Sigma

Notes: Curves extracted from PV tests report
Curves in red line represent the tolerance
Curves in dotted blue line represent average +3 sigma.

PERFORMANCES PARAMETERS DEFINITIONS

Primary current definition:

Definition of typical, minimum and maximum values:

Minimum and maximum values for specified limiting and safety conditions have to be understood as such as values shown in “typical” graphs. On the other hand, measured values are part of a statistical distribution that can be specified by an interval with upper and lower limits and a probability for measured values to lie within this interval. Unless otherwise stated (e.g. “100 % tested”), the LEM definition for such intervals designated with “min” and “max” is that the probability for values of samples to lie in this interval is 99.73 %. For a normal (Gaussian) distribution, this corresponds to an interval between -3 sigma and $+3$ sigma. If “typical” values are not obviously mean or average values, those values are defined to delimit intervals with a probability of 68.27 %, corresponding to an interval between $-\sigma$ and $+\sigma$ for a normal distribution. Typical, minimum and maximum values are determined during the initial characterization of a product.

Output noise voltage:

The output voltage noise is the result of the noise floor of the Hall elements and the linear amplifier.

Magnetic offset:

The magnetic offset is the consequence of an any current on the primary side. It's defined after a stated excursion of primary current.

Linearity:

The maximum positive or negative discrepancy with a reference straight line $U_{out} = f(I_p)$.

Unit: linearity (%) expressed with full scale of I_{PN} .

Delay time t_{D90} :

The time between the primary current signal (I_{PN}) and the output signal reach at 90 % of its final value.

Sensitivity:

The transducer's sensitivity S is the slope of the straight line

$U_{out} = f(I_p)$, it must establish the relation:

$$U_{out}(I_p) = U_C/5 (S \times I_p + U_O)$$

Offset with temperature:

The error of the offset in the operating temperature is the variation of the offset in the temperature considered with the initial offset at 25 °C.

The offset variation I_{OT} is a maximum variation the offset in the temperature range:

$$I_{OT} = I_{OE \max} - I_{OE \min}$$

The offset drift TCI_{OEAV} is the I_{OT} value divided by the temperature range.

Sensitivity with temperature:

The error of the sensitivity in the operating temperature is the relative variation of sensitivity with the temperature considered with the initial offset at 25 °C.

The average temperature coefficient of sensitivity TCS_{AV} , S_T is the maximum temperature variation of S (in ppm or %) of the sensitivity in the temperature range:

$$S_T = (\text{Sensitivity max} - \text{Sensitivity min}) / \text{Sensitivity at } 25^\circ\text{C}$$

The average temperature coefficient of sensitivity TCS_{AV} is the S_T value divided by the temperature range.

Deeper and detailed info available is our LEM technical sales offices (www.lem.com).

Offset voltage @ $I_p = 0$ A:

The offset voltage is the output voltage when the primary current is zero. The ideal value of U_O is $U_C/2$. So, the difference of $U_O - U_C/2$ is called the total offset voltage error. This offset error can be attributed to the electrical offset (due to the resolution of the ASIC quiescent voltage trimming), the magnetic offset, the thermal drift and the thermal hysteresis. Deeper and detailed info available is our LEM technical sales offices (www.lem.com).

Environmental test specifications:

Refer to LEM GROUP test plan laboratory CO.11.11.515.0 with “Tracking_Test Plan_Auto” sheet.

Name	Standard
THERMAL FATIGUE	
Ageing 85 °C / 85 % <i>HR</i> / 1000 h	IEC 60068-2-78 (2001)
Thermal cycle test -40 °C / 125 °C / 1000 h	IEC 60068-2-14 test Nb (01.2009)
Thermal shocks -40 °C / 125 °C / 1000 h	IEC 60068-2-14 test Na (01.2009)
High temperature storage at 125 °C / 1000 h	IEC 60068-2-2 (07.2007)
Low temperature storage at -50 °C / 1000 h	IEC 60068-2-1 (03.2007)
MECHANICAL FATIGUE	
Shocks test (50 m·s ⁻² x 10 x 3 axis)	IEC 60068-2-27 test Ea (2008)
Vibration test (random 10 - 2000 Hz / 9.723 g)	
ELECTRICAL TESTS	
Phase delay	--
Output noise	98.20.00.575.0
<i>di/dt</i> (100 A/μs)	98.20.00.545.0
<i>du/dt</i> (2 kV A/μs to 2 kV)	98.20.00.545.0
Withstand voltage (2500 V RMS -50 Hz / 1 min)	ISO 16750-2 (2012)
Insulation resistance (500 V dc / 1 min)	
EMC TESTS	
Radiated Emissions: Absorber Lined Shielded Enclosure (ALSE)	IEC CISPR25
Radiated Immunity: Bulk Current Injection (BCI)	ISO 11452-1 & -4
Radiated Immunity: Anechoic chamber	ISO 11452-1 & -2
Resistance to Electrostatic Discharge Voltage	ISO 10605 (2001)

Soldering recommendations:

1 - Iron Soldering plated-through holes device

- Mass pin (E1 to E4 see on drawing page 2): 200 W / 370 °C Iron temperature / 7 mm flat W200 Weller
- ASIC terminals (1,2,3,4 see on drawing page 2): 80 W / 410 °C Iron temperature / 0.8 mm diameter STTC125 - Metcal

2 - Wave soldering plated-through holes device

LEM recommends to use the following equipment/parameters for the soldering of the HC5FW family in order to be compliant with the IPC A-610 (more than 75 % land coverage):

- Machine VITRONICS SOLTEC 6622 in combi wave mode
- Flux SLS 65
- Sn96 lead free solder (SAC 305)
- Temperature profile as below
- PCB 2143-00 - thickness: 1.6 mm - mass pin E1 to E4: hole Ø 2 - Asic pin: hole Ø 1.

3 - SMD soldering by pin in paste STH (SMD through hole)

- Must be validated by user
- ASIC MSL 1 level.

IMPORTANT NOTICE

The information in this document is considered accurate and reliable. However, LEM International SA and any company directly or indirectly controlled by LEM Holding SA ("LEM") do not provide any guarantee or warranty, expressed or implied, regarding the accuracy or completeness of this information and are not liable for any consequences resulting from its use. LEM shall not be responsible for any indirect, incidental, punitive, special, or consequential damages (including, but not limited to, lost profits, lost savings, business interruption, costs related to the removal or replacement of products, or rework charges) regardless of whether such damages arise from tort (including negligence), warranty, breach of contract, or any other legal theory.

LEM reserves the right to update the information in this document, including specifications and product descriptions, at any time without prior notice. Information in this document replaces any previous versions of this document. No license to any intellectual property is granted by LEM through this document, either explicitly or implicitly. Any Information and product described herein is subject to export control regulations.

LEM products may possess either unidentified or documented vulnerabilities. It is the sole responsibility of the purchaser to design and operate their applications and products in a manner that mitigates the impact of these vulnerabilities. LEM disclaims any liability for such vulnerabilities. Customers must select products with security features that best comply with applicable rules, regulations, and standards for their intended use. The purchaser is responsible for making final design decisions regarding its products and for ensuring compliance with all legal, regulatory, and security-related requirements, irrespective of any information or support provided by LEM.

LEM products are not intended, authorized, or warranted for use in life support, life-critical, or safety-critical systems or equipment, nor in applications where failure or malfunction of an LEM product could result in personal injury, death, or significant property or environmental damage. LEM and its suppliers do not assume liability for the inclusion and/or use of LEM products in such equipment or applications; thus, this inclusion and/or use is at the purchaser's own and sole risk. Unless explicitly stated that a specific LEM product is automotive qualified, it should not be used in automotive applications. LEM does not accept liability for the inclusion and/or use of non-automotive qualified products in automotive equipment or applications.

Applications that are described herein are for illustrative purposes only. LEM makes no representation or warranty that LEM products will be suitable for a particular purpose, a specified use or application. The purchaser is solely responsible for the design and operation of its applications and devices using LEM products, and LEM accepts no liability for any assistance with any application or purchaser product design. It is purchaser's sole responsibility to determine whether the LEM product is suitable and fit for the purchaser's applications and products planned, as well as for the planned application and use of purchaser's third-party customer(s).

Stressing and using LEM products at or above limiting values will cause permanent damage to the LEM product and potentially to any device embedding or operating with LEM product. Limiting values are stress ratings only and operation of the LEM product at or above conditions and limits given in this document is not warranted. Continuous or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the LEM product.

LEM products are sold subject to the general terms and conditions of commercial sale, as published at www.lem.com unless otherwise agreed in a specific written agreement. LEM hereby expressly rejects the purchaser's general terms and conditions for purchasing LEM products by purchaser. Any terms and conditions contained in any document issued by the purchaser either before or after issuance of any document by LEM containing or referring to the general terms and conditions of sale are explicitly rejected and disregarded by LEM, and the document issued by the purchaser is wholly inapplicable to any sale or licensing made by LEM and is not binding in any way on LEM.
